To be durable, whitewash should be prepared in the following manner:

Take the very best stone-lime, and slack it in a close tub, covered with a cloth to preserve the steam. Salt—as much as can be dissolved in the water used for slacking and reducing the lime—should be applied, and the whole mass carefully strained and thickened with a small quantity of sand, the purer and finer the better. A few pounds of wheat flour mixed as paste may be added, and will give greater durability to the mass, especially when applied to the exterior surface of buildings. With pure lime, properly slacked and mixed with twice its weight of fine sand and sifted wood-ashes in equal proportions, almost any color may be made by the addition of pigments. Granite, slate, freestone and other shades may be imitated, and without any detriment to the durability of the wash. This covering is very often applied and with good effect, to underpinning, stone fences, roofs, and the walls of barns and other outbuildings.—Germantown Telegraph. WHITEWASHING. 2383 37=40 96 I IFE ON A GEORGIA PLANTA-112 TION. Journal of a Residence on a Georgia Plantation in 1838-1839. By Frances Anne Kemble. 12mo, Cloth. 109 (Just Ready.) (Just Ready.)

"The Journal of Mrs. Frances Anne Kemble during her residence upon a plantation in Georgia as the wife of the proprietor, is the most thrilling and remarkable picture of the interior social life of the slaveholding section in this country that has ever been published. Our previous accounts of that life have been derived from outside observers. But the Journal of Mrs. Kemble was jotted down from day to day as she lived upon the plantation of which she was mistress. There is no excuse, no palliation of facts, but the whole system is laid bare and quivering before the eye. So faithful and final a witness whave not had, Even Uncle Tom's Cabin is only founded upon fact. The Journal of Mrs. Kemble is fact itself." 132 167 465-5-0 2-68.17 Potato Poultice.

Perhaps it is not generally known how much pleasanter and more agreeable, as well as more efficacious, is a poultice made of potatoes than one made of bread. It keeps heat longer, can be re-heated several times, and does not wet the clething. Peel, boil and mash the potatoes; enclose in a muslin bag, and apply to the affected part. To boil them in hot water has a very soothing effect, and enhances their virtue. A poultice made of boiled beans is by some thought to be better than potatoes, but both are worthy of a trial. POTATO POULTICE. V 88: 47x 20.60 + 24-50\$ 16-75-4 20-004 23:83 % 37=70+ 248 25 May 15 th old com flato 298:25.
